

PIONEER AIR INTRODUCES THE AUTO BODY SHOP 400

The AUTO BODY SHOP 400 system eliminates particulates, moisture and oil in the air lines for auto body paint shops utilizing a four stage removal process. The first stage allows precise regulation of pressure and volume of air delivered to the paint gun. The second stage acts as a 'gross cut' oil separator which also removes particulate matter down to 0.1 microns and moisture. It also includes a visible level indicator sight-glass. The third stage contains the Pioneer CS60 and ECS filtration elements to remove vapor-phase moisture, oil and microscopic particles. The fourth stage contains the Pioneer MD15 with 3/16" activated alumina desiccant and ECS25 filtration for a full and complete final polishing of the air. The unit requires no electrical connection and has no purge air loss.

The AUTO BODY SHOP 400 is currently available at the introductory price of \$500 each. Please contact customerservice@pioneerair.com to place your order for prompt delivery.
